

Complete Flight Booking API Flow

Overview

This document outlines the complete booking flow for flights, including Oneway, Roundtrip, and Multicity bookings. It covers the various steps involved in booking a flight, including the selection of ancillary services such as meals, excess baggage, and seat selection. Each API involved in the process is explained along with its purpose and timing.

Booking Flow Steps

The booking flow consists of several API calls in a specific order. This section outlines the general flow for different types of bookings: Oneway, Roundtrip, and Multicity.

1. Oneway Booking Flow

The following steps are involved in booking a one-way flight:

1. ****GetLowFareTripAvailability****: Retrieves available flights.
2. ****GetServiceBundleOffersRequest****: Fetches bundles for the selected flight.
3. ****GetIntPrice_****: Retrieves final price for the selected flight with bundles.
4. ****Sell****: Book the flight and create a PNR.
5. ****GetSSRAvailabilityForBooking****: Fetch SSR availability for services like infant, meal, etc.
6. ****SellSSR****: If applicable, book SSR services.
7. ****GetSeatAvailability****: Fetch seat availability.
8. ****AssignSeat****: Assign seats to passengers.
9. ****AddPayment****: Collect payment for the flight.
10. ****BookingCommit****: Finalize the booking and generate the PNR.

2. Roundtrip Booking Flow

For roundtrip bookings, the flow is similar to oneway, but it requires separate API calls for both onward and return journeys.

1. ****GetLowFareTripAvailability (Onward & Return)****: Retrieves available flights for both onward and return segments.
2. ****GetServiceBundleOffersRequest (Onward & Return)****: Fetches bundles for both onward and return flights.
3. ****GetIntPrice_ (Onward & Return)****: Retrieves the final price for the selected flights with bundles.
4. ****Sell (Onward & Return)****: Book both the onward and return flights.
5. ****GetSSRAvailabilityForBooking (Onward & Return)****: Fetch SSR availability for both segments.
6. ****SellSSR (Onward & Return)****: Book SSR services as needed.
7. ****GetSeatAvailability (Onward & Return)****: Fetch seat availability for both legs of the journey.
8. ****AssignSeat (Onward & Return)****: Assign seats to passengers for both segments.

9. ****AddPayment****: Collect payment for the entire roundtrip.
10. ****BookingCommit****: Finalize the booking for both onward and return journeys.

3. Multicity Booking Flow

For multicity bookings, the flow is similar, with additional segments:

1. ****GetLowFareTripAvailability****: Retrieves available flights for each segment.
2. ****GetServiceBundleOffersRequest****: Fetches bundles for each flight segment.
3. ****GetIntPrice_****: Retrieves the final price for the selected flights with bundles.
4. ****Sell****: Book the selected flight segments.
5. ****GetSSRAvailabilityForBooking****: Fetch SSR availability for each segment.
6. ****SellSSR****: Book SSR services as needed.
7. ****GetSeatAvailability****: Fetch seat availability for all segments.
8. ****AssignSeat****: Assign seats for each segment.
9. ****AddPayment****: Collect payment for the entire multicity trip.
10. ****BookingCommit****: Finalize the booking for all segments.

Ancillary Sales (Meals, Excess Baggage, Seat Selection)

Ancillary services like meals, excess baggage, and seat selection can be offered during the booking flow.

****Meal Selection:****

After selecting a flight, the ``GetSSRAvailabilityForBooking`` call can be used to check the availability of meal options. Meals can be booked by using the ``SellSSR`` API call, which allows the addition of meal preferences.

****Excess Baggage:****

Similarly, excess baggage can be added through the ``GetSSRAvailabilityForBooking`` API to check availability, and booked using ``SellSSR``.

****Seat Selection:****

Seat selection can be done via the ``GetSeatAvailability`` API, which provides available seat options for the selected flight. Seats can be assigned using the ``AssignSeat`` API, and seat selection can be added as part of the ancillary sales.

Visual Booking Flow

Please refer to the flowchart diagram for a visual representation of the booking process.
